WELCOME MESSAGE

Dear IEEE SENSORS 2012 participants, welcome to Taipei, Taiwan.

This is the 11th IEEE SENSORS conference. Based on the technical and social programs, this conference promises to be one of the best, if not THE best of the 11. Based on the preregistrations, the attendance is expected to be between 650 and 700.

The number of abstract submissions, 1082, is close to the all-time record of 1092, in 2009. The acceptance rate is 54%. Of the 580 accepted papers, 266 will be presented in oral and 314 in poster sessions. It is important to note that the poster and oral paper submissions have undergone identical peer reviews. Where a paper is presented has no relationship to its quality. It depends only on where the paper best fits into the program.

The success of a conference depends not only on the technical program but also on the social program. The highlights of this year's social program will be the banquet and the visit to the National Palace Museum. This museum has a permanent collection of nearly 700 000 pieces of ancient Chinese artifacts and artworks, making it one of the largest in the world. The collection encompasses over 8000 years of Chinese history.

The banquet will be held on the top floor of the magnificent Grand Hotel, a landmark whose main building is one of the world's tallest Chinese classical buildings. Be sure to bring your camera!

IEEE sponsored or cosponsored more than 1000 conferences, and published more than 100 journals last year. The successes of IEEE are due to the more than 200 000 volunteers who serve IEEE each year. Similarly, the success of IEEE SENSORS 2012 is due to the dedication of more than 150 volunteers. The Technical Program Committee (TPC) alone consisted of 138 volunteers.

We wish to thank all the volunteers who contributed, but, especially the Regional Program Chairs: Masayoshi Esashi, Juergen Brugger and Reza Ghodssi; Organizing Committee Chair Yu-Cheng Lin; Tutorial Chair Jerwei Hsieh; Special Session Co-Chairs Paul Chao and Peter Chang; Best Paper Award Chair Lina Sarro; and Conference Treasurer Mike McShane.

We wish to recognize and thank our Keynote Speakers: Prof. Kiyoshi Toko of Kyushu University, Japan; Prof. Gina-Luca Bona of EMPA, Switzerland; and Prof. Khalil Najafi of University of Michigan, USA; whose participation in this conference is invaluable. We appreciate their expertise and willingness to share their time with us in Taipei.

WELCOME MESSAGE

We also wish to thank the professional conference organizers of Conference Catalysts, LLC, under the leadership of Chris Dyer. Chris, Judy Scharmann and the rest of the Conference Catalysts team played a vital role in organizing this conference.

The locations of IEEE SENSORS conferences rotate each year; Asia/Pacific to Europe/Africa to the Americas. Next year, IEEE SENSORS 2013 will be held in Baltimore, MD, USA, 3 to 6 November 2013. We hope to see you there.

TECHNICAL PROGRAM INFORMATION

The technical program consists of three Keynote Sessions, six parallel Lecture/Special Sessions of contributed papers, and three Poster Sessions that include Late News and Open Posters.

Guide to Understanding Session Numbering

Each session in the technical program is assigned a unique number, which clearly indicates when and where the session is presented. The number of each session is shown before the session title. A typical number is shown below:

Typical Session Number: B2L-A

The first character (i.e., B) indicates the day of the Conference:

A = Monday B = Tuesday C = Wednesday

The second character (i.e., 2) indicates the session time:

1 = morning 2 = mid-morning 3 = afternoon 4 = late-afternoon

The third character (i.e., L) indicates what type of paper the session is:

L = Lecture Session P = Poster Session

The fourth character (i.e., A) indicates which room the session is held in:

A= 101A **B**= 101B **C**= 102 **D**= 101C **E**=101D **F**= 103

Poster Sessions
Three poster sessions will be held in Room 201, from15:00 - 16:50 on Monday, 13:10 - 15:00 on Tuesday, and 10:20 – 12:10 on Wednesday. Posters will be on display and authors will be available for questions during their appointed time. All poster papers are listed in this program on the day that they are on display.

Guide to Understanding Poster Numbering
Each poster in the technical program is assigned a unique number, which clearly indicates when and where the poster is presented. The number of each poster is shown on the left-hand side, before the title. A typical number is shown below:

Typical Poster Number: B3P-K

The first character (i.e., B) indicates the day of the Conference that the poster will be on display:

A = Monday B = Tuesday C = Wednesday

The second character (i.e., 3) indicates the time of the day the session is held:

1=morning 2=mid-morning 3=afternoon 4=late-afternoon

The third character (i.e., P) indicates that the paper is a poster.

The fourth character (i.e. K) indicates the category of the poster for that day.

Professor Kiyoshi Toko

"Biochemical Sensors for Mimicking Gustatory and Olfactory Senses"

Dr. Toko is a Distinguished Professor of the Graduate School of Information Science and Electrical Engineering, Kyushu University, and a dean for 2008-2011. He received his PhD from Kyushu University in the study of self-organization in biomembranes and biological systems. He continued this work during a period as Research Associate and Associate Professor in the same laboratory. During that time he proposed a concept "to measure the taste" and succeeded in developing the first-ever taste sensor using lipid membranes, i.e. the electronic tongue. At present, this taste sensor is sold commercially in Japan and all over the world. He is now one of the leading scientists in the field of bioelectronics, which deals with devices and phenomena related to both electronics and biology. He has published more than 500 papers in well-respected journals on the subject of taste and odor sensors and the application of lipid membranes. He has directed and continues several government projects in food, nanotechnology, and integrated sensing technology using biosensors and the taste/odor sensor. Due to these results, he won many prizes such as Prize for Science and Technology (MEXT), Fire Defense Agency Commendation Encouragement Prize, Japan Society of Applied Physics Fellow Commendation, Momofuku Ando Prize, Harushige Inoue Prize (JST) and Tateishi Prize. His research results are frequently on air in TV broadcast. He is a member of professional associations of applied physics, taste and smell, membrane, food science and technology, and electrical engineering, and is an Editor of an international journal, Sensors and Materials.

Professor Gian-Luca Bona

"Material Challenges and Opportunities for Sensor Applications"

Gian-Luca Bona studied physics at ETH Zurich, Switzerland, where he received a Ph.D. degree in 1987 for his investigations of surface magnetic structures with short pulsed laser excitation. Subsequently, he joined the IBM Zurich Research Laboratory and first conducted research in optical sampling of ultra-fast opto-electronic devices and later shifted his focus to the design and characterization of intense, high-speed quantum-well semiconductor lasers. In 1994, he initiated work on integrated optical devices with high index contrast which led to a series of reconfigurable planar lightwave circuits and later on expanded to photonic bandgap concepts for high speed interconnects in computer applications. From 2004 to 2008, he led as department group manager the Science & Technology function in the IBM Almaden Research Center in San Jose, CA, with a strong focus on advanced materials for the next generation semiconductor industry as well as on expanding CMOS fabrication methods and on the development of nonvolatile memory devices. From mid 2008 until mid 2009, he was director Tape Storage Solutions in the IBM Systems and Technology Group, located in Tucson, AZ and responsible for the development of magnetic tape media, heads and tape drives as well as storage subsystems which include tape automation, interconnects and

controllers. Gian-Luca Bona is currently CEO of EMPA the Swiss Materials Science & Technology Laboratory and Professor for Photonics at the Swiss Federal Institutes of Technology ETH & EPFL. His personal scientific interest focuses on photonic materials and its testing for novel applications such as for communication, interconnects and sensors.
